Table alignment

1 Each table below exercises one kind of cell alignment. The cell text says where it should sit: “start” means flush left in LTR and flush right in RTL; “end” is the opposite edge; “centre” is centred in its column.

1. Start (th/tc), single-line cells

Head1	*Head2*	*Head3*
start	start	start
start start start	st	start start
st	start start start	st

2. End (thr/tcr), single-line cells

Head1	*Head2*	*Head3*
end	end	end
end end end	en	end end
en	end end end	en

3. Centre (thc/tcc), single-line cells

Head1	*Head2*	*Head3*
centre	centre	centre
centre centre centre	ce	centre centre
ce	centre centre centre	ce

4. One alignment per column (start, centre, end)

Book	*Chapters*	*Verses*
Genesis	50	1533
Ruth	4	85
Song of Songs	8	117

5. Mixed alignments within each column

start start start start	centre centre centre	end end end end
centre	end	start
end	start	centre

6. Start, wrapping cells

Key	*Description*
start	start: a long cell whose text runs on for long enough that it has to wrap onto a second line and probably a third, ending here.
start start	start short

7. End, wrapping cells

Key	*Description*
end	end: a long cell whose text runs on for long enough that it has to wrap onto a second line and probably a third, ending here.
end end	end short

8. Centre, wrapping cells

Key	*Description*
centre	centre: a long cell whose text runs on for long enough that it has to wrap onto a second line and probably a third, ending here.
centre centre	centre short

9. Spanning cells

Head1	*Head2*	*Head3*
start start	start start	start start
start (spans 1–2)	end (spans 2–3)	start
centre (spans 1–3)		
start		

end (spans 1–3)
start (spans 1–3)
[2] End of tests.
